

```
if (group > 0) {  
    System.out.println(name + ", Great your in group " + group + ".");  
} else {  
    System.out.println("wrong last name. Please try again.");  
}
```

The issue was that I couldn't figure out how to have the user's full name with their first name and last name.

```
if (group > 0) {  
    System.out.println(name + " " + lastName + ", Great your in group " + group + ".");  
} else {  
    System.out.println("wrong last name. Please try again.");  
}
```

Fixed the issue by having the both variable with commented spaces.
